### **OVERVIEW**

 We introduce the logics E(G) for representing probabilistic expectation over classes G of Łukasiewicz games.

Łukasiewicz Games 0000000000	The Logics E( & ) 00000000	Games with Expectations 00000	Complexity 0000

#### **OVERVIEW**

- We introduce the logics E(G) for representing probabilistic expectation over classes G of Łukasiewicz games.
- Based on these logics we define a new class of games where players aim is to randomise their strategic choices in order to affect the other players' expectations over an outcome as well as their own.

## **OVERVIEW**

- We introduce the logics E(G) for representing probabilistic expectation over classes G of Łukasiewicz games.
- Based on these logics we define a new class of games where players aim is to randomise their strategic choices in order to affect the other players' expectations over an outcome as well as their own.
- ► We characterise the complexity for both the logics E(𝔅) and the newly introduced games.
