

Name of the Project

Non Cooperative Situations

<i>Name</i>	Name of the described SNC.
<i>State</i>	The state in which the agent is during the detection of NCS. This state can be defined by a set of values of attributes or results of methods which can be stereotyped perception, characteristic or representation.
<i>Description</i>	Textual description for the NCS.
<i>Conditions</i>	Conditions describing the different elements that enable to locally detect the NCS. Methods and attributes used to express conditions must be stereotyped perception or representation.
<i>Actions</i>	Actions describing what the agent has to do to remove this NCS. Methods and attributes used to express actions must be stereotyped action or skill.
