Inconsistency

- Inconsistency is everywhere
- But it is not necessarily bad – often it can be ignored
- Sometimes it is desirable
 - Tax inspectors
 - Murder detectives
 - Lawyers in court
 -

Inconsistency

- Inconsistency can cause problems
- Following instructions,
- Air traffic control,
- Patient treatment plans,
- Legislation,
-
- But immediate resolution is not always possible!

Inconsistency

Questions

- **The term “inconsistency” is used in many different ways**, even in computer science, and so we need to better understand the range of concepts behind this?
- **Most approaches aim to suppress inconsistency** (e.g. multiple db, sensor fusion, knowledge merging, multiple ontologies,), yet it can be valuable to know about key inconsistencies.
- Dealing with **inconsistency is context-dependent**: Can uncertainty techniques be developed to help to find key inconsistencies; for example in information integration (e.g. **tax records**), or argumentation (e.g. **negotiation system**),?
- **Inconsistency is closely tied to language**. Can uncertainty techniques help to better characterise this correspondence?
